

SAUDI INTERNATIONAL PETROCHEMICAL COMPANY

International Assignment Opportunities

Saudi International Petrochemical Company (Sipchem) is an established Saudi Joint Stock Company, which is currently developing a major petrochemical complex in the Eastern Province of Saudi Arabia. The project initially consists of a 996,000 mta Methanol plant and a 50,000 mta Maleic Anhydride/Butanediol (MAN/BDO) plant, 300,000 mta Acetic Acid plant and a Vinyl Acetate Monomer (VAM) plant, with associated Utilities and Offsites. The products produced will be marketed throughout the Kingdom, GCC States and on a worldwide basis. The following married or single status assignment vacancies immediately exist on the owner's team:

PROJECT MANAGERS

Acetic Acid Plant

Carbon Monoxide, Utilities & Off Sites and Pipeline & Port Facility

Vinyl Acetate Monomer (VAM) Plant

BS degree in Chemical or Mechanical Engineering with a minimum of 10-15 years experience in Project Management, specifically in chemical and petrochemical EPC projects in an LSTK environment. Membership of PMI and PMP is an asset. Should be a goal oriented team player. Previous experience working overseas in a multi-cultural environment is a plus. Will ensure completion of the project in time, on budget and at the approved level of quality standards. Should have experience with project technologies based in the USA, England, Singapore and Malaysia. Responsible for managing the interface between Process Technology Licensors, Project Management Services Contractor and the EPC Contractor. Will efficiently manage the owner's interest, administer the contract for the EPC phase and hand over the plant from the project phase to the operation phase. Ensure the coordination and support of the start-up, test run and commercial operations of the plant. Reports to the Project Director and is a key and senior member of the project team that will actively participate in the overall project strategies and performance. For each of these three (3) positions; excellent knowledge and direct experience in the technologies, units and/or associated facilities as listed above is an asset for assignment in leading these specific project teams. **These positions will initially be assigned to the LSTK contractor's offices in Europe or Japan, depending on which project assigned, and will later be relocated to the jobsite in Saudi Arabia during the construction phase.**

PROJECT ENGINEERS

Acetic Acid Plant

Carbon Monoxide

Vinyl Acetate Monomer (VAM) Plant

Utilities & Off Sites

Pipeline & Port Facility

BS degree in Engineering with a minimum of 10-15 years experience in Project Engineering, specifically in chemical and petrochemical EPC projects in an LSTK environment. Should have experience with project technologies based in the USA, England, Singapore and Malaysia. The ability to work in a multi-cultural environment with a high level of team spirit and supporting others is critical.

Will be responsible for coordinating the interface between Process Technology Licensors, the Project Management Services Contractor, the EPC Contractor and the owner and its operation team, the specialized engineers and consultants to ensure full compliance with the technical and commercial requirements of the contract, making sure that a safe and reliable plant is designed and handed over to the Operations team.
